

# **Ralton Leaders**

# Monthly Report January 2015

Winner of the 2010 Standard & Poors' Fund Awards - Separately Managed Accounts Category

### **Investment Profile**

#### A Professionally Managed Portfolio of Australian Shares

The Ralton Leaders model portfolio is a separately managed account, or SMA, actively managed by Ralton Asset Management (Ralton). SMAs are professionally managed portfolios of direct shares whereby the investor receives beneficial ownership of the underlying securities.

### Investment Objective

The objective of the Leaders SMA is to provide investors with long-term capital growth and tax effective income from a portfolio of blue-chip Australian shares. The portfolio aims to deliver returns that are consistently above the S&P/ASX 100 Accumulation Index over a three to five year period.

Key Portfolio Features		
Inception	1 February 2008	
Benchmark	S&P/ASX 100 Accumulation Index	
Authorised Investments	Companies in the S&P/ASX 100 Index or those amongst the top 100 by size.

Financials (ex-Property)	32.1%	41.5%	-9.4%
Total	100.0%	100.0%	

## **Month in Review**

### **Performance Summary**

- The S&P/ASX 100 Accumulation Index finished the month of January 3.41% higher, with strong performances from the Consumer Discretionary and Telecoms sectors pushing the market higher
- The Ralton Leaders Model Portfolio returned 3.04% for January, underperforming the benchmark index by 0.37%
- The portfolio's Materials sector exposure added to portfolio returns, although our cash holdings and underweight to Financials detracted from relative performance for the month

ResMed Inc	Overweight	QBE Insurance	Overweight
Incitec Pivot	Overweight	Amcor Limited	Overweight
Orora Limited	Overweight	Transpacific Industries	Overweight

### **Monthly Performance Attribution**

### **Positive Contributors**

Medical technology company Resmed (RMD, +16.4%) was a key contributor to portfolio returns for January, buoyed by a strong quarterly profit result. Here, the key driver was the launch of ResMed's latest product platform, namely the S10 flow generator used for patients with sleep apnea. RMD's sales results for the 2nd quarter of the financial year, the first full period after the much-anticipated launch of the S10, did not disappoint, with very strong sales growth in both the US and ROW regions. The S10 is very much "infomatics" (or data sharing) focused with the device monitoring patient results and compliance, automatically sending the data via an inbuilt modem to doctors, distributors and insurance companies. At this stage, RMD appear to have the jump on their competitors, leading distributors and doctors to preference the use of the RMD device. The key here is user simplicity. If the device is easy to use for patients, and the distributors spend less time in set-up and service calls, profitability is boosted.

Incitec Pivot (IPL, +13.2%) consolidated gains made in the last quarter of 2014, adding a further 13% in January. As we highlighted in the latest quarterly report, IPL had traded in a tight range for some time, however with the release of the company's annual profit results in November, the continuing decline in the Australian dollar, and easing US gas prices, sentiment towards the company appears to have changed. Perhaps the key to the turnaround in share price was the improved operating performance and projected manufacturing output for both of IPL's Moranbah and Phosphate Hill manufacturing plants issues at each of these plants have certainly weighed on investor confidence in recent times. Global prices for fertiliser, mainly DAP or Di-ammonium phosphate, although somewhat seasonal, have also strengthened in recent months, further supporting short-term profits. In summary, the market is beginning to recognise both the improvement in manufacturing performance and the rising free cash flow that should be delivered by IPL.

Amcor spin-off Orora Limited (ORA, +9.2%) was the portfolio's next-best contributor, adding to the 68% share price return delivered in calendar year 2014. ORA is benefitting from various cost savings derived from a capital investment program and operational improvements initiated by its former parent. The new B9 pulp mill in Botany continues to 'ramp-up' production and management has thus far delivered on the cost savings that the B9 business case was targeting. At a financial level, the strong free cash flow and strong asset base mean that ORA is paying down debt quickly. As debt flexibility improves, investors will be looking for the company to either make further value adding purchases in the fragmented US market (thus far ORA has only made a small US acquisition) or alternatively, return excess funds to shareholders in some form.

#### Underperformers

QBE Insurance (QBE, -5.4%) was weaker across the month, with the share price again being impacted by the strength in global bond prices. A fall in bond yields is a negative for QBE as it reduces the expected re-investment rate on their massive investment book and increases their liabilities (through its impact on the discount rate). By contrast, several of our portfolio holdings, such as Telstra (TLS), Transurban (TCL) and Sydney Airports (SYD), benefit from the decline in yields. At an operational level, QBE continues to focus on business simplification and cost cutting. At a strategic level, QBE continues to exit what it considers marginal insurance businesses and to focus on its core offering. This has been a clear message since CEO Neal took the reins more than 2 years ago, and supports our continued investment.

Amcor Limited (AMC, -5.9%) lost ground in January when CEO Ken MacKenzie announced his intention to resign in

June this year, after a highly successful 10-year stint in the top job. MacKenzie has been instrumental in the corporate turnaround at Amcor, driving a material change in the sales culture of the company, a restructure and realignment of business divisions, the integration of two large acquisitions and finally, a concerted push into emerging markets with AMC's key customers. Although change at the top always needs to be considered, we view his replacement, the current CFO Ron Delia, as a very capable executive. Prior to being CFO he ran one of the key AMC business divisions and brings considerable global experience from major companies. We have confidence that MacKenzie's culture and returns-driven approach will endure, and that given the opportunities that still exist for AMC across their markets, the company remains a worthy investment. As always, we will be monitoring this investment closely for any changes that may alter our view.

Transpacific Industries (TPI, -4.1%) underperformed the market in January, we believe largely due to the falling oil price. TPI have an extensive fleet of trucks in their business, used to transport waste. You would expect that they should receive some benefit in the short term from the falling oil price, in the form of lower fuel (input) costs. However TPI also collect, process, recycle, and sell various oil-based waste products, and the lower oil price means lower profits on this business stream. In the short term, this is weighing on the TPI share price. In December, however, the company made a key strategic acquisition, purchasing the Melbourne Western landfill from materials company Boral. Ownership of this Victorian landfill will enable TPI to collect fees on waste destruction, rather than pay away tolling fees to third parties. Capturing this margin benefit is a key plank of CEO Boucher's strategy and it was pleasing to see the strategy being implemented.

There were no portfolio changes during the month.

# **Investment Approach**

#### A Three Stage Investment Process

Intensive bottom-up research is the cornerstone of the entire process, supplemented by top-down economic and thematic views. The process is disciplined and consistently applied, using a number of proprietary qualitative and quantitative techniques to ensure that targeted companies have been thoroughly scrutinised. The aim is to uncover undervalued businesses. The companies that Ralton typically invests in are those with strong and reliable management, good profit and dividend growth expectations, reasonably predictable future profits and cash flows, and a very clear business model.

#### Stage 1: Defining the Investment Universe (Screening)

The first stage of the process is to narrow the number of stocks in the investment universe by applying a number of screens. This approach systematically eliminates companies that do not meet certain minimum standards, allowing the Investment team to focus more intensely on companies of potential interest.

#### Stage 2: Bottom-up Fundamental Company Research

Ralton's research programme is focused on understanding the key drivers of business performance and returns, namely people, operations, products and services, and market dynamics. For companies remaining in the Investment Universe, a detailed assessment is made of executive management, interviews competitors and suppliers, reviews financials, and forms a clear view on the outlook for the company's industry.

#### Stage 3: Portfolio Construction

Risk management and capital preservation are key themes underlying the portfolio construction framework. With a focus on actively managing down-side portfolio risk for investors, Ralton constructs an efficiently diversified portfolio of high quality, undervalued companies, and invests for the long term (typically 3 to 5 years) in an effort to maximise after tax-returns.

# **About the Manager**

Ralton Asset Management is part of the OC Group, a boutique investment specialist majority owned by members of its investment team and key executives.

Ralton is a Value manager with a fundamental investment approach designed to identify quality businesses trading at a considerable discount to valuation. The process is guided by three fundamental beliefs:

- Markets are not perfectly efficient and the true value of a business is not always reflected in its share price;
- Undervalued companies can be identified through detailed and intensive research; and
- Capital preservation is critical to wealth creation.

#### **The Investment Team**

**Andrew Stanley** *BEc, LLB, ACA, FFin, MA AppFin* Portfolio Manager, Ralton Model Portfolios

Andrew Stanley is the lead portfolio manager for the Ralton portfolios. He is supported by a dedicated and highly experienced team of investment professionals each with an average 18 years investment experience. Andrew has been working in financial markets for more than 19 years, including the past 5 years managing the Ralton portfolios. Prior to Ralton, he was an Executive Director at UBS in Hong Kong, and over the course of his career has held senior positions with major investment institutions in Melbourne, Hong Kong, Tokyo and New York. Andrew started his career at Arthur Andersen in Melbourne.
